

Choose HardieTrim® boards
FOR GOOD LOOKS THAT LAST.

Protect the entire exterior with the same proven material

Combine North America's #1 brand of siding with the only trim that has the strength to stand beside it. James Hardie® fiber cement siding and HardieTrim® boards are uniquely Engineered for Climate® to withstand the harshest conditions and keep your homes looking beautiful longer.

- Gives homes authentic character and uncompromising performance
- Saves time and money with less upkeep on all exterior cladding
- Available primed or with ColorPlus® Technology finishes
- Exceptional warranties through a single, trusted manufacturer

JamesHardie™

Siding | Trim

HardieTrim® boards outperform wood trim boards

As part of a 2004 re-siding project on a suburban Chicago home, HardieTrim® boards and wood trim boards were all installed and painted at the same time. Today, the HardieTrim boards show no signs of aging, while expansion and contraction have caused cracking and peeling in the wood trim's finish.

HardieTrim® boards	vs.	Wood trim boards
 Advanced primer system or ColorPlus® Technology finishes extend the maintenance cycles for siding and trim.		As weather, water and pests gang up on wood, time compounds the problem. Frequent upkeep may be required.
 Resist shrinking and swelling in the face of humidity and temperature changes as well as wet or freezing conditions. Superior dimensional stability results in better paint adhesion.		Can shrink and swell under the steady barrage of fluctuating temperatures, rain and humidity, which may cause paint to prematurely crack and peel.
 Defend against moisture penetration. Our uniquely rugged formulation resists damage from water absorption.		Nearly defenseless against the unstoppable force of water, which can absorb into wood trim and may lead to rotting, swelling or cracking.
 Fiber cement is too tough to chew on for even the hungriest of pests.		Untreated wood trim is subject to damage caused by termites, woodpeckers and other pests. Victimized wood is left scarred.
 Fiber cement is fire resistant and noncombustible. Recognized by fire departments nationwide*.		Wood boards are natural fuel for fire.
 15-year non-prorated, transferable limited warranty.		Untreated wood trim has no warranty.
